OVER 200 ACRES DEVOTED TO GROWING HARDY TREES, PLANTS, SHRUBS, EVERGREENS AND ROSES

Where We Are We are located in Arkansas — in the northwest corner county (Benton), only twelve miles south of the Missouri line and twenty-six miles east of the Oklahoma line; eighty-one miles almost due north of Fort Smith, Arkansas, and eighty-three miles, almost due south of Joplin, Missouri; one hundred twenty-nine miles east of Tulsa, Oklahoma, and one hundred six miles southwest of Springfield, Missouri. On Federal highways 71 and 62, just south of Rogers, Arkansas.

ON THE TIP TOP OF THE OZARK MOUNTAINS where our growing season is almost thirty days shorter than at Fort Smith, Arkansas. Our summers are short and nights are cool, and our growing season more like that of North Missouri, Iowa and Nebraska, than Eastern and Southern Arkansas.

Hence, our stock is well adapted to the extreme Northern, Eastern and Western States as well as being the best for Southern States.

YOUNGBERRY

The new Youngberry has achieved the greatest success ever scored by any of the berry family. It not only bears very heavily but the fruit is easy to handle; it is very attractive, ships well, keeps well and cans well. It has so many commercial possibilities and it fits in so well in the home garden that everybody should be interested in having a few vines or a commercial planting.

Youngberries are among the largest berries, of dark wine color, have a minimum of seed, highly flavored and yield a rich looking cherry colored juice. You will find that more fruit will be produced from a few Youngberry bushes than any others on the same amount of ground. Youngberries thrive where any other berry fruits grow but do best in states of the same latitude as Ohio and South.

NOVELTIES FROM THE OZARKS

JUJUBE (Hardy Chinese Date)

The Chinese Date (Jujube or Zizyphus) is a fruit from the high interior of China. The tree is a heavy and constant bearer and commences to bear at an early age, four-year-old trees having produced 150 pounds of fruit. It blooms very late in the spring, avoiding all danger from spring frosts. The fruit is one to two inches long, and chocolate colored. It is delicious when eaten fresh or cured like dates, and is excellent for preserves and jam. Cooked in a sugar syrup and allowed to dry, it becomes a most tasty and palatable confection which we believe will eventually rival the date as a commercial product. Every home should have one or more trees. It likes a clean back yard where it is not cultivated but will grow anywhere.

ARKANSAS STONE FRUIT NURSERY STOCK IS VIRUS-FREE

Our stone fruits are grown under the vigilant eyes of inspectors of the Arkansas State Plant Board in a region free from virus diseases making it by far the safest and best nursery stock for you to buy.

Virus diseases such as "Peach Yellows," "Phony Disease," "Peach Mosaic" and "Little Peach Disease" have ruined thousands of valuable peach orchards and practically wiped out the peach industry in certain peach-growing areas. These diseases are established in orchards by means of a few diseased trees in shipments of nursery stock and when planted these diseases spread from tree to tree by insects. The only control measures so far avail-

able are the destruction of the trees and planting of new trees grown in regions free of these diseases.

Don't take any chances by ordering trees that might be infected with these diseases. ALL OF OUR STONE FRUIT NURSERY STOCK IS GUARANTEED COMPLETELY FREE FROM VIRUS DISEASES AND IS THEREFORE THE BEST AVAILABLE FOR PLANTING IN ANY OF THE PEACH-GROWING AREAS IN THE UNITED STATES. BE SAFE AND ORDER STOCK GUARANTEED VIRUS FREE. DON'T RISK THE LOSS OF YOUR ENTIRE ORCHARD.

EVERGREENS for Year Around Beauty

GIVES YOUR HOME CHARM AND BEAUTY

BROAD LEAF EVERGREENS

ABELIA (*Abelia rupestris grandiflora*)—A beautiful low growing evergreen flowering shrub; leaves a glossy dark green contrasting effectively with the red tinged bark. The numerous small white tinged pink flowers resemble miniature Arbutus, having comparatively deep, slender throats though the individual flower is only about three-quarters of an inch in length. Blooms from June until frost, delicately sweet scented. Occasionally a "wild" vigorous growing shoot appears which should be pinched off when a dense shrub is desired. 18 to 24 inches, \$3.00; 2 to 3 ft., \$4.00; 3 to 4 ft., \$5.00.

BOXWOOD (*Buxus sempervirens*)—Everyone is familiar with Boxwood and its good qualities. There is hardly a plant that can be used in quite so many positions. For edging, as specimens, for urns, window boxes, it is very useful. The foliage is always a shining dark green even through the winter. It is a heavy feeder and should never be planted in soil unless it can get plenty of fertility and moisture. 12 to 18 inches, \$3.00; 18 to 24 inches, \$4.50.

EVERGREEN EUONYMUS (*Euonymus Patens*)—One of the best broad leaf evergreens for the Southwest. Luxuriant of growth and naturally symmetrical in shape, it is well adapted for a hedge as for a specimen plant or a background for a shrub group; may be kept in almost any desired shape by pruning; leaves occasionally followed by bright red berries. 2 to 3 ft., \$3.00.

MAGNOLIA GRANDIFLORA—The grandest of evergreens and flowering trees. Has large, glossy, bright green leaves. Succeeds throughout Texas and Oklahoma, as well as in other southern states. By clipping off all but a few of the tip leaves when taken up, and treated as in our handling, they are readily transplanted. 12 to 18 inches, \$3.00; 18 to 24 inches, \$3.50; 24 to 30 inches, \$4.50; 30 to 36 inches, \$5.00; 3 to 4 ft., \$6.00; 4 to 5 ft., \$7.50; 5 to 6 ft., \$10.00.

MAHONIA (*Berberis aquifolium*)—(Oregon Grape)—Dense, low spreading shrub, beautiful holly-like foliage, glossy green, bluish-purple and bronze, moderate growth, all 5 feet, exceedingly hardy; blossoms yellow racemes. March to May, followed by blue grape-like berries. Fine for low shrubbery, mass plantings, individual specimens or groups, equally good in shade or sun. 10 to 12 inches, \$1.50; 12 to 18 inches, \$2.25; 18 to 24 inches, \$3.50; 2 to 3 ft., \$4.25.

NANDINA—Upright in habit of growth, medium height, narrow pointed foliage which is rich red when young, turning to dark green when fully matured, and which takes on bright colors during the fall. Flowers are white followed by red berries in the fall which remain on well into the winter. 15 to 18 inches, \$2.00; 18 to 24 inches, \$3.00; 24 to 30 inches, \$4.50.

PIRACANTHA Lalandi—The most hardy Pyracantha. Upright grower, white flowers. Large orange-colored berries which are beautiful from midsummer until late winter. 4 to 5 ft., \$5.00.

SPRUCE

BLACK HILLS SPRUCE—Considered a close relative of White Spruce, from the Black Hills of South Dakota. The foliage runs from green to a bluish tint; some as blue as a Colorado Blue Spruce. One of the hardest of all Spruces, grows unusually symmetrical, compact and bushy, evident in even the smallest trees, which develop into round, sturdy, compact trees even when small. Tree reaches twenty-five to forty feet with a ten to twelve foot spread of branches. 1 to 2 ft., \$2.50; 2 to 3 ft., \$3.75; 3 to 4 ft., \$5.25; 4 to 5 ft., \$6.75.

COLORADO BLUE—The queen of the spruce family; the color is a beautiful blue, which holds well all through the year; this is one of the most valuable of ornamental evergreens. 1 to 2 ft., \$2.50; 2 to 3 ft., \$3.75; 3 to 4 ft., \$5.25; 4 to 5 ft., \$6.75.

NORWAY SPRUCE—Becomes a tall tree of majestic, conical shape. One of the most rapid growing and shapely of the tall, dark green spruces. 1 to 2 ft., \$2.50; 2 to 3 ft., \$3.75; 3 to 4 ft., \$5.25; 4 to 5 ft., \$6.75.

WHITE SPRUCE—One of the very best conifers, especially for cold climates. Compact, upright growing, long lived, retaining its branches to the ground, aromatic, drought-resistant; varies in color from light green to glaucous blue. 1 to 2 ft., \$2.50; 2 to 3 ft., \$3.75; 3 to 4 ft., \$5.25; 4 to 5 ft., \$6.75.

THE PINES

PINE, Mugho (*Pinus montana mugho*)—This is an excellent dwarf pine, being globe shaped and erect branching. It is very attractive, especially in spring, when the new growth, which seems like mature candles, completely covers the bush. 12 to 18 inches wide, \$2.50; 18 to 24 inches wide, \$3.50.

NORWAY PINE (*Red Pine*)—A two-leaved pine, native to Newfoundland; one of the most beautiful, extremely hardy and adaptable; excellent for bold effects. 1 to 2 ft., \$2.50; 2 to 3 ft., \$3.00; 3 to 4 ft., \$4.00; 4 to 5 ft., \$5.00.

THE JUNIPERS

JUNIPER, Andora—One of the finest spreading Junipers of recent introduction. Grows closer to the ground than the Pfitzer. During summer it has a silver reflex to the otherwise green foliage, in winter it turns a purplish cast, which is unusual in evergreens. 18 to 24 in., \$3.50.

JUNIPER, Irish Erect, slender and formal in habit; column or pyramidal form, foliage sage green, very compact; perfectly hardy and a real beauty in combination with other forms and colors of evergreens. 3 to 4 ft., \$4.75; 4 to 5 ft., \$6.00.

JUNIPER, Pfitzer's (Chinese Pfitzeriana)—This is the most popular of all the spreading types. Its habit of growth, its pendulous branches and attractive foliage is strikingly beautiful. The branches are horizontally spreading and the terminals slightly drooping. It lays close to the ground and for edging larger plantings there is nothing superior. Flowering lines are especially valuable in landscape planting and this Juniper seems to fill requirements better than any other summer and winter. Because of its ability to withstand the soot and dust of cities will thrive where others fail. 18 to 24 in., \$3.50; 2 to 3 ft., spread, \$4.50; 3 to 4 ft., spread, \$6.00.

SILVER PFTZER JUNIPER—Same as regular Pfitzer except beautiful silvery foliage. 18 to 24 in., \$4.00.

SPINY GREEK JUNIPER—Narrow and columnar, having many erect branches and branchlets. The foliage is spiny, with sharp points and of a glaucous blue color. Makes an extremely dense growth. 18 to 24 in., \$4.50.

ONKOR JUNIPER—A variety of the savin juniper. A very fast grower and has a more loose and open appearance, quite different from the Savin. It has a deep rich color and bears both juvenile and adult foliage. 18 to 24 in., \$3.50; 2 to 3 ft., \$4.50.

SAVIN JUNIPER—The old familiar, low many-branched evergreen. Sometimes reaches four feet in height. Well covered with short tufted, dark green foliage and frequently displays blackish or purplish berries. 18 to 24 in., \$4.00.

PROCUMBEN JUNIPER—A good, hardy, thrifty, rapid growing prostrate juniper with prickly blue-green foliage. 18 to 24 in., \$4.00.

GLOBE ARBORVITAE—A new variety that is very handsome. In shape it is absolutely round or globular, very dense in growth, and does not require shearing. It does not grow over 4 to 5 feet tall; foliage is deep dark green, its little branches being of unusual delicacy. Be sure to order one or more of these beautiful and attractive species and we will guarantee that it will please you. This is one of the most rare of the dwarf evergreens. Our trees are well rooted, transplanted and root pruned. 12 to 18 inches, \$3.00.
